PROFILE

DevOps Engineer with 7 years of experience designing, deploying, and maintaining containerized applications in on-premises and air-gapped production environments. Deep expertise in Kubernetes orchestration — including HA multi-node cluster setup, RBAC, HPA, stateful application management, node affinity & pod scheduling, and ingress migration from NGINX to Traefik. Skilled in infrastructure automation, CI/CD pipelines, and operating distributed data systems including MongoDB, Cassandra, and Redis at scale.

KEY SKILLS

- **Tools:** Ansible, Git, Artifactory, Azure DevOps, Jenkins
 - **Messaging Systems:** RabbitMQ, Kafka
 - **Containers & Orchestration:** Docker, Kubernetes
 - **Cloud Platforms:** AWS
 - **Scripting Languages:** Python, Bash
 - **Microservices:** Apache Camel, Spring Boot
 - **Databases:** MongoDB, Cassandra, Redis
 - **Web Servers:** HAProxy, NGINX
 - **Monitoring & Logging:** Nagios, Prometheus, Grafana, InfluxDB, Elasticsearch, Kibana, Loki,
 - **OS & Networking:** Linux (RHEL, Ubuntu, CentOS), LVM, tcpdump
-

PROFESSIONAL EXPERIENCE

BACKOFFICE IT SOLUTIONS Pvt. Ltd.

April 2022 - Present

Led end-to-end migration from Docker Swarm to Kubernetes across production environments, establishing HA multi-node clusters with Disaster Recovery for all critical projects. Architected and maintained CI/CD pipelines via Azure DevOps for containerized microservices deployments on both Kubernetes and Docker Swarm. Automated operational workflows through custom Bash and Python scripts, reducing manual intervention across routine and recovery tasks. Conducted quarterly DR drills with switchover in under 15 minutes failover, and led POCs for evaluating and onboarding new technologies into the stack.

Project: NAVFAS

- Deployed and managed services on a Kubernetes HA multi-node cluster with dedicated node affinity and pod scheduling rules to ensure workloads run on designated nodes per application requirements
- Configured RBAC policies to enforce least-privilege access control across namespaces and service accounts
- Exposed services securely via Traefik Ingress for both HTTP and HTTPS routing
- Maintained a DR cluster with quarterly failover drills.

Project: NAVRTA

- Configured and managed Horizontal Pod Autoscaler (HPA) to handle dynamic traffic loads, ensuring service stability under peak usage
- Deployed microservices using Azure DevOps CI/CD pipelines with automated rollout to Kubernetes
- Set up Traefik Ingress with TLS termination for all externally exposed services
- Maintained DR environment with tested quarterly recovery procedures.
- Managed StatefulSets for persistent workloads requiring stable network identity and storage

Project: NAVCrypto

- Managed full lifecycle of containerized services on a Kubernetes HA cluster including deployments, rollbacks, and upgrades
- Implemented RBAC and namespace-level isolation for multi-team access management
- Integrated Traefik Ingress for unified HTTP/HTTPS routing across crypto services
- Supported DR setup and quarterly validation, ensuring minimal RTO

Platform & Infrastructure (Across All Projects)

- Migrated ingress layer from NGINX to Traefik across all Kubernetes clusters, standardizing routing and enabling dynamic configuration
- Wrote custom Bash scripts to automate MongoDB and Cassandra dump/restore operations, scheduled daily for backup compliance
- Automated OS-level provisioning and configuration using Ansible across RHEL/Oracle Linux servers
- Migrated critical infrastructure from CentOS 7 to Oracle Linux 8 with zero downtime
- Built and maintained observability stack: Prometheus, Grafana, and Loki for metrics, dashboards, and log aggregation
- Managed Kafka and RabbitMQ clusters including topic configuration, consumer group monitoring, and alerting

Keen and Able Computers Pvt. Ltd.

Jan 2019 - April 2022

Fino Payment Bank

- Automated infrastructure tasks using Ansible and shell scripting; managed CI/CD using Jenkins and GitLab.
- Configured and maintained artifact repositories using Artifactory.
- Developed and deployed microservices; handled troubleshooting and root cause analysis.
- Managed service deployments and monitoring in JBoss Fuse environments.
- Integrated SonarQube for code quality checks and used JMeter for performance testing.
- Administered HAProxy for traffic load balancing.
- Configured messaging queues in ActiveMQ.

Client: TAHAL

- Developed and containerized web applications using Angular, HTML, and Docker.
- Collaborated on front-end and back-end integration to meet project specifications.

Client: Kanpur Smart City

- Designed and deployed microservices supporting REST and SOAP APIs.
- Implemented containerized services on Docker, enabling modular and scalable deployment.

EDUCATION & CERTIFICATIONS

Bachelor of Technology

Computer Engineering

Babasaheb Bhimrao Ambedkar University

Intermediate

St. Antony's Inter College

High School

Lucknow Public College

AWARDS

- Outstanding Accomplishment Award – Backoffice IT Solutions
- 2nd Prize – Company Hackathon, Keen & Able Computers
- Top Consultant Award – Fino Payments

PERSONAL DETAILS

Date of Birth

19th May 1996

Gender

Male

Marital Status

Unmarried

Nationality

Indian
